

# Plugin Management

- [Overview](#)
- [Add](#)
- [Edit](#)
- [Delete](#)

## Overview

[top](#)

This page is designed to allow you to install and manage a range of plugins within your Yellowfin instance. The types of plugin available through this page include;

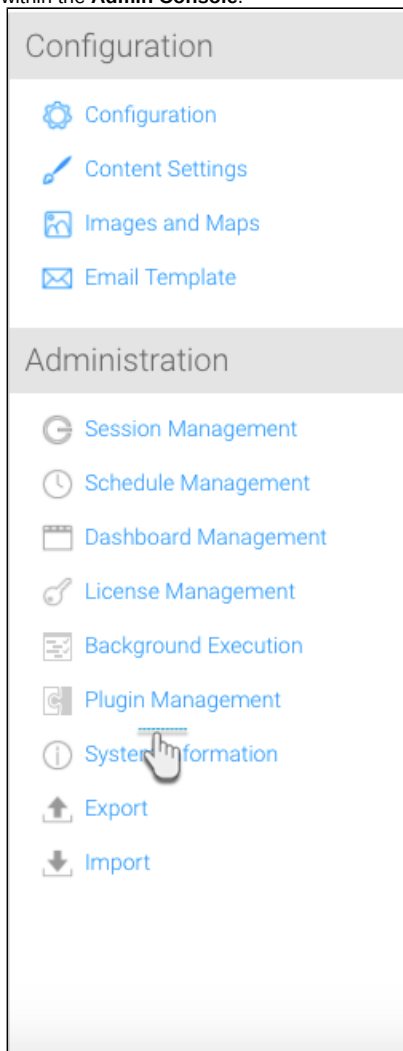

- Third Party Connectors
- JDBC Drivers
- Advanced Functions
- Converters
- Custom Formatters

## Add

[top](#)

In order to add a plugin you will first need to create or obtain one - you can find a selection on the [Yellowfin Marketplace](#). Once you have a plugin to install, follow these steps:

1. Access the **Plugin Management** page within the **Admin Console**.

2. From here, click on the **Add** button at the bottom of the existing plugins list.

|                           | Name             | Description                            | Type                                       |
|---------------------------|------------------|----------------------------------------|--------------------------------------------|
| <input type="checkbox"/>  | YouTube          | Youtube Third Party Connector          | PLUGIN                                     |
| <input type="checkbox"/>  | Google Analytics | Google Analytics Third Party Connector | PLUGIN                                     |
| <input type="checkbox"/>  | Google Sheets    | Google Sheets Third Party Connector    | PLUGIN                                     |
| <input type="checkbox"/>  | Twitter          | Twitter Third Party Connector          | PLUGIN                                     |
| Select All / Deselect All |                  |                                        | <a href="#">Add</a> <a href="#">Delete</a> |

3. On the **New Plugin** lightbox, drag and drop your plugin file. This should either be a .jar or .yfp type.

4. Provide a **Name** and **Description** for the plugin, which will help users understand what its intended purpose is. This will not be the label of the plugin outside of the **Plugin Management** page.

New Plugin

Name

Description

Drag a Plugin file here (.jar/.yfp)

+ Copy

Cancel

5. Once Yellowfin has finished processing your file, click **Submit**.

New Plugin

Byte Count Formatter

Custom Formatter

bytecountformatter.jar

+ Add more

Submit

6. You will now see your newest plugin in the list.

|                                                                                          | Name                 | Description                            | Type                                        |
|------------------------------------------------------------------------------------------|----------------------|----------------------------------------|---------------------------------------------|
| <input type="checkbox"/>                                                                 | YouTube              | Youtube Third Party Connector          | PLUGIN                                      |
| <input checked="" type="checkbox"/>                                                      | Byte Count Formatter | Custom Formatter                       | PLUGIN                                      |
| bytecountformatter.jar<br>com.hof.mn.custom.format.ByteCountFormatter (Custom Formatter) |                      |                                        | <a href="#">Edit</a> <a href="#">Delete</a> |
| <input type="checkbox"/>                                                                 | Google Analytics     | Google Analytics Third Party Connector | PLUGIN                                      |
| <input type="checkbox"/>                                                                 | Google Sheets        | Google Sheets Third Party Connector    | PLUGIN                                      |
| <input type="checkbox"/>                                                                 | Twitter              | Twitter Third Party Connector          | PLUGIN                                      |
| Select All / Deselect All                                                                |                      |                                        | <a href="#">Add</a> <a href="#">Delete</a>  |

## Edit

[top](#)

Editing a plugin can mean either adjusting the name and description, or updating the plugin file(s).

1. Click on the plugin in the list and select the **Edit** link.

| Name                                                                                     | Description                            | Type                                        |
|------------------------------------------------------------------------------------------|----------------------------------------|---------------------------------------------|
| <input type="checkbox"/> Youtube                                                         | Youtube Third Party Connector          | PLUGIN                                      |
| <input type="checkbox"/> Byte Count Formatter                                            | Custom Formatter                       | PLUGIN                                      |
| bytecountformatter.jar<br>com.hof.mi.custom.format.ByteCountFormatter (Custom Formatter) |                                        |                                             |
|                                                                                          |                                        | <a href="#">Edit</a> <a href="#">Delete</a> |
| <input type="checkbox"/> Google Analytics                                                | Google Analytics Third Party Connector | PLUGIN                                      |
| <input type="checkbox"/> Google Sheets                                                   | Google Sheets Third Party Connector    | PLUGIN                                      |
| <input type="checkbox"/> Twitter                                                         | Twitter Third Party Connector          | PLUGIN                                      |

2. Click on the **Remove** button next to a component of the plugin in order to remove it.

3. Click on the **+ Add more** link in order to load new files as part of the plugin.

4. Click **Submit** to complete the edit.

## Delete

[top](#)

In order to delete a plugin, or multiple, follow one of these options:

1. Click on the name of a single plugin and select the **Delete** link.

OR

2. Check the box next to one or more plugins to remove and click the **Delete** button.

| Name                                                                                     | Description                            | Type                                        |
|------------------------------------------------------------------------------------------|----------------------------------------|---------------------------------------------|
| <input type="checkbox"/> Youtube                                                         | Youtube Third Party Connector          | PLUGIN                                      |
| <input type="checkbox"/> Byte Count Formatter                                            | Custom Formatter                       | PLUGIN                                      |
| bytecountformatter.jar<br>com.hof.mi.custom.format.ByteCountFormatter (Custom Formatter) |                                        |                                             |
|                                                                                          |                                        | <a href="#">Edit</a> <a href="#">Delete</a> |
