

# What's New

We've retired the What's New page and instead created something we think will be more useful to the wiki audience. You can now view the latest release notes on the dedicated page. It provides a full rundown of what's in the latest release, with descriptive text to explain the changes, along with links to relevant wiki and Community pages, so you can see what's changed right away.

Take a look at the new [Release Notes](#) and let us know what you think.
