Using Advanced Functions for Data Modeling

Overview

This section guides you how to use advanced functions (a Report Builder feature) for data modeling. Ensure that you have the correct plugin installed for the modeling platform or format (learn how to do that here), and then use it to integrate and visualize your statistical data through the Advanced Function feature.

Model Outputs

The following data science outputs are currently supported. Click on any of them to reference detailed guides on how to use them.

- PMML
- H2O.ai
- PFA
