Treemap

Overview

Compares metric values via a size relationship. Can also be used to show hierarchical relationships.

Chart Data Options

Option	Description
Label	Select a field to be used to split the treemap into segments. You can add multiple categories here to display hierarchies.
Colour	Optional: You can select one field (metric for shaded scale, or dimension for categorical) to define colours for segments.
Size	Optional: Select a metric to set the size of each segment. If not defined, the size will be set by the number of occurrences in the report.

Treemap Tutorial

Summary

In order to set up a Treemap Chart you will need:

1. Create a report with chart display
    a. Select one or more fields to use as the **Label**
    b. Select a field to use as the **Colour** (optional field)
    c. Select a field to use as the **Size** (optional field)
2. Create your chart, selecting **Treemap** as the type under the **Analytical** heading
3. Provide the **Label, Size, and Colour** options
4. Customise the Chart as required
5. Proceed to the **Output** step
6. **Save** your report
