Different from	Not equal to or different from a single alphanumeric or string value	
Between	Between variable 1 and variable 2 these will need to be legitimate parameters such as date, age etc.	Numeric
Not Between	Not between variable 1 and variable 2 these will need to be legitimate parameters such as date, age etc.	Numeric
In List	One or more alphanumeric or string values	
Not In List	Two or more alphanumeric or string values	
Is Null	Record contains no value for selected attribute. No Parameter can be set	
Is Not Null	Record contains any value. No Parameter can be set	
	Advanced Filtering	
Contains	Records that contain text that matches the input value	Text
Does Not Contain	Records do not contain text that matches the input values	Text
Starts With	String starts with letter or letters	Text
Does Not Start With	Records do not contain text at the start of the string that ends with the input values	Text
Ends With	String end with letter or letters	Text
Does Not End With	Records do not contain text at the end of the string that ends with the input values	Text
Is Empty String	A record that is an empty string	Text
Is Not Empty String	A String that is not empty	Text
Equals Column	The records in the filtered column will have values equal to the values of an alternate column	
Different From Column	The records in the filtered column will not have values equal to the values of an alternate column	
Greater Than Column	The records in the filtered column will have values greater than the values of an alternate column	Numeric
Greater Than or Equal to Column	The records in the filtered column will have values greater than or equal to the values of an alternate column	Numeric

Less Than Column	The records in the filtered column will have values less than the values of an alternate column	Numeric
Less than or Equal To Column	The records in the filtered column will have values less than or equal to the values of an alternate column	Numeric
Minimum Date	This option will find the earliest date value available.	Numeric
Maximum Date	This option will find the latest date value available.	Numeric
Link to Filter	This filter allows the user to select one value on the report page and have it used across multiple filters. For example have Athlete Region set as a User Prompt filter and link the Camp Region to it. This will mean that the user selects the Athlete Region and the Camp Region will be set to the same value.	

* The Type column is only specified if the operator is not common across all data types. Numeric Types include date data types.
