Statistical Analysis via Data Transformation

Overview

Yellowfin's transformation capabilities enable you to pull in your model via a transformation widget to produce a seamless flow into your environment. Users have the power to bring advanced data science models into the Data Transformation module, and perform powerful statistical analysis through a drag-and-drop environment.

Before getting started on these, get familiar with Yellowfin's Data Transformation module.

Model Outputs

The following data science outputs are supported. Click on any of them to reference detailed guides on how to use their steps.

- PMML
- H2O.ai
- PFA
- R
