Transformation Code Examples

Here are a few Transformation Step examples, developed in Java, that you can refer to, or download and use in your environment.

> ⚠️ You can download our example bundles containing the example code, along with a yfp file containing any dependencies required to run it in your environment.

Example 1: Text Data Generator Step

Example of an input step that generated several rows and columns of text data, based on configuration.

See the Java code here, or click here to download the full example.

Example 2: Upper Case Converter Step

Transform your data to upper case with the help of this example.

See the Java code here, or click here to download the example.
