

Filter Values

- [Overview](#)
- [User Prompt](#)
 - [Manual Entry](#)
 - [List Selection](#)
 - [Prompt Selection](#)
- [Defined Value](#)
- [Pre-Defined Period](#)

Overview

[top](#)

There are different options available when it comes to filter values. As a report writer you can choose to set:

1. User Prompt which allows the report reader to define the filter value to match when they run the report.
2. Defined Value which sets the value during the report creation process so the report is always restricted to the same result subset.
3. Pre-Defined Period which uses a date range on the report, which is always the same calculation, but dynamic by being relative to the report run date. This option is only available for date or timestamp fields.

User Prompt

[top](#)

The default value for filters added to the Data step is User Prompt. If this setting is not changed, the user that runs the report will be prompted to provide filter values at the time of running the report. This is useful when the audience for a report is broad, meaning that each user may be interested in a different subset of results.

There are three methods for defining User Prompt filter values, and these depend on the formatting applied to the filter. bq. See [Filter Formatting](#) for more information.

1. Manual Entry - this allows the user to manually type the required value(s).
2. List Selection - this allows the user to select value(s) from a list provided. This list may either be provided by an [Org Ref Code](#) or [Cached Filters](#).
3. Prompt Selection - this allows the user to prompt the database for values and select from a list returned.

Manual Entry

Filters that require users to define values through manual entry can include single values, ranges, and lists.

The screenshot shows a 'Filters' panel with four filter rows and two buttons at the bottom. Each row has a field name, a comparison operator, and an input area.

Field	Operator	Input
Gender	Equal to	<input type="text"/>
Demographic	In List	<input type="text"/>
Invoiced Date	Between	<input type="text"/>
Average Age a...	Between	<input type="text"/> Min <input type="text"/> Max

Buttons:

List Selection

The report writer can set filter value lists to be cached, meaning the system does not have to go back to the source database to retrieve a list of values each time the user runs the report. These lists can also be generated through the use of [Org Ref Code](#). Both types are defined through [Filter Formatting](#).

Filters

Gender Equal to
Female

Demographic In List
Adventure

Prompt Selection

In order to select from a list of values, where a list has not been cached, the user will have to prompt the database for a list.

1. Click on the prompt filter icon to the right of the filter

Demographic In List

×

○

2. Select the required values from the displayed list

Search Filter Values

Demographic In List

Adventure
Culture
Family
Luxury
Relaxation
Sport

Submit

3. You will now see your list populated with your selected values

The screenshot shows a filter interface with the title 'Demographic' and a link 'In List'. Below the title, there are two input fields, each preceded by an 'X' icon. The first field contains the text 'Family' and the second field contains the text 'Sport'. Below these fields is a search bar with a magnifying glass icon.

Defined Value

[top](#)

In order to define values for filters, you will need to:

1. Open the Filter Settings on the Data step and click on Define Value

The screenshot shows the Filter Settings interface. On the left, there are four filter rows, each starting with 'And' and a dropdown arrow. The filters are: 'Gender' (yellow square icon), 'Demographic' (yellow square icon), 'Invoiced Date' (yellow square icon), and 'Average Age at Camp' (blue circle icon with a percentage sign). To the right of each filter name is a comparison operator (Equal to, In List, Between, Between) and a 'Define Value' link. A hand cursor is pointing at the 'Define Value' link for 'Invoiced Date'.

2. You will now have multiple options, depending on what type of field you are using. Select an option that is not User Prompt

The screenshot shows a dialog box titled 'Select Filter Value' with a close button (X) in the top right corner. The dialog box has a header 'Invoiced Date Between'. Below the header, there are three radio button options: 'User Prompt' (selected), 'Defined Value', and 'Pre-defined Period'. Below these options is a blue information icon (i) and a text box that says 'Allow users to specify the filter value(s) when running the report.' At the bottom of the dialog box is a blue 'Submit' button.

3. Define the value(s) to be used and submit

The screenshot shows a dialog box titled "Select Filter Value" with a close button (X) in the top right corner. The main heading is "Invoiced Date" followed by the word "Between" in blue. There are three radio button options: "User Prompt", "Defined Value" (which is selected), and "Pre-defined Period". Below the "Defined Value" option, there are two "Dynamic Date" sections. Each section has a toggle switch (currently off) and a date input field with the placeholder "dd/mm/yyyy" and a calendar icon. The first "Dynamic Date" section has a mouse cursor hovering over its toggle switch. At the bottom of the dialog is a blue "Submit" button.

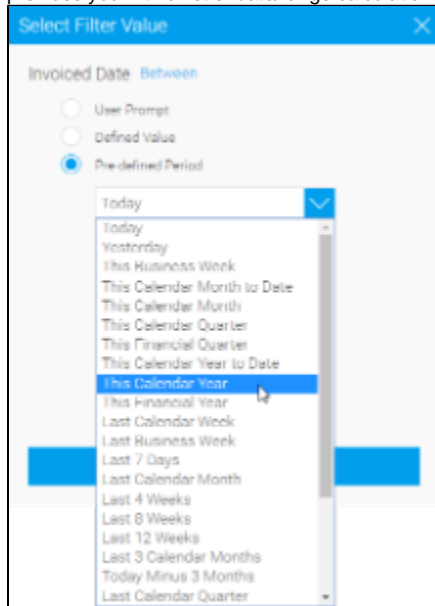

4. Alternatively, define dynamic values (relative to the date the report is run) and submit

The screenshot shows the same "Select Filter Value" dialog box. The "Defined Value" radio button is still selected, but a mouse cursor is hovering over it. The "Dynamic Date" toggle switch for the first section is now turned on (blue). The date input fields are replaced by a dropdown menu showing a plus sign, a downward arrow, and the word "Days", followed by another downward arrow. The second "Dynamic Date" section is also turned on and has similar dropdown menus. The "Pre-defined Period" option remains unselected. The blue "Submit" button is at the bottom.

Pre-Defined Period

[top](#)

When using date field an advanced filter option becomes available, which provides you with a list of date/range calculations to select from. Simply define a value (as outlined above) and select the **Pre-defined Period** option. When using date field an advanced filter option becomes available, which provides you with a list of date/range calculations to select from.
