# The Yellowfin Suite of Products

As of version 8, Yellowfin will no longer be a standalone platform, but a suite of 5 different products. The Yellowfin Suite comprises five industry-leading components with different capabilities like automated analysis, storytelling, dashboard monitoring, data analysis, and data preparation. Each product can be used individually or as part of the complete integrated suite.

Yellowfin Data Prep

This product is used to connect to your data source and prepare your data for analysis. This will be used by administrators to prepare data to make it ready for analysis. Includes modules such as data source connections, and data transformation.

Yellowfin Data Discovery

The core data analysis product that lets you explore your data, build reports and charts, and share insights. Rich in features such as the report builder, Assisted Insights, advanced functions, collaboration, and more.

Yellowfin Dashboards

Yellowfin dashboards are designed for visualisation, making them easy to understand, engaging, and informative. Easily and quickly monitor KPIs and track business, team, or individual performance in real time.

Yellowfin Stories

A data storytelling product that lets you embed fully functional reports and provide narrative to your data. Share your story across a common platform, and track reader's interactivity. Learn More.

Yellowfin Signals

An automated analytics product that runs analysis in the background and automatically discovers the most relevant insights. Alerts of important changes are send to appropriate users, who can explore why these occur and get to the root of the problem. Learn More.
