

Custom Formatter Appendix

DataType

DataType parameters are used to define the data type of a field to which a formatter is applied. These are defined in Yellowfin's **UserInputParameter** class, as final static integers.

Type	Description
TYPE_UNKNOWN	Unknown Value.
TYPE_NUMERIC	Numeric Value.
TYPE_DATE	Date Value.
TYPE_TIME	Time Value.
TYPE_TIMESTAMP	Timestamp Value.
TYPE_BOOLEAN	Boolean Value.

RenderType

RenderType parameter determines which type of output to render for.

Type	Description
RENDER_HTML	Render for HTML.
RENDER_TEXT	Render for Text.
RENDER_CSV	Render for CSV.
RENDER_LINK	Render as link.
RENDER_FILTER_HTML	Render as HTML filter.
