On-Premises Installation

-

Overview

This general set up process is suitable for installing and running Yellowfin on a Windows, Linux, or Mac OSX based desktop or laptop.

This guide shows how to set up Yellowfin for the following use cases:

- Installing Yellowfin on a Windows, Linux, or Mac OSX based desktop or laptop for evaluation or training purposes.

- Installing Yellowfin on a Windows, Linux, or Mac OSX based server for evaluation, training or production purposes.

Time Estimation

Estimated installation time (for first time install) is about **30 to 60 minutes**. This includes time for preparation to install, the installation process, and starting the Yellowfin application for the first time.

Section overview

- **Phase 1: Prerequisites -** This section covers all the hardware and software requirements that you will need prior to beginning installation. Ensure you have all the hardware and software requirements ready.
- **Phase 2: Installation -** This section covers the step-by-step guide on the Yellowfin installation process.
- **Phase 3: Post installation -** This section includes details on how to start Yellowfin, and logging in. Additional help is provided on getting started with your analytics application.
