

Install Plug-in

In order to integrate the data science models into an instance of Yellowfin, install the plug-in for the modelling platform or format. These plug-ins will allow models to be connected via the Advanced Function or Data Transformation features.

Here's how to install the plug-in to support the modelling output:

1. Download the plugin from Yellowfin's Marketplace:
 - a. Go to the Marketplace (<https://portal.yellowfinbi.com/YFWebsite-Marketplace-77991>).
 - b. Click on Transform Steps.

- c. Select and download the plugin you require.
2. Return to Yellowfin, and navigate to the Admin Console screen. (Left side menu > Administration > Admin Console.)
 3. Click on Plugin Management under Administration in the right-side panel.

4. Click on the Add button.
5. Then drag the plugin in the New Plugin lightbox, or click on the icon to browse and select it.
