

# Using Advanced Functions for Data Science Models

## Overview

This section explains how to use advanced functions (a Report Builder feature) to integrate your data science models into Yellowfin. Ensure that you have the correct plugin installed for your preferred data science model platform or format (learn how to do that [here](#)), and then use it to integrate and visualize your statistical data through the Advanced Function feature.

## Model Outputs

The following data science outputs are currently supported. Click on any of them to reference detailed guides on how to use them.

- [PMML](#)
- [H2O.ai](#)
- [PFA](#)
