Overview

top

Туре	Icon	When to Use
Meter	121	You want to measure the rate of change of a measure against pre-defined targets. Useful for dashboard reporting.
Thermometer	· ·	Vertical representation of the meter chart, indicating a range of qualitative indicators.
Dial	(Used to communicate key performance indicators.

Chart Data Options

Option	Description
Measure	The metrics you add to this field will serve as the measure for your chart. (This can only be a numeric value.)
Target	Add a target value to you chart, to highlight it through needles or other indicators. (This can only be a numeric value.)
Tool Tip	You can drag a field here to display specific details in the cursor's tool tip.
Animation	This feature displays animated or moving data on your meter charts.

Meter Chart Tutorial

top

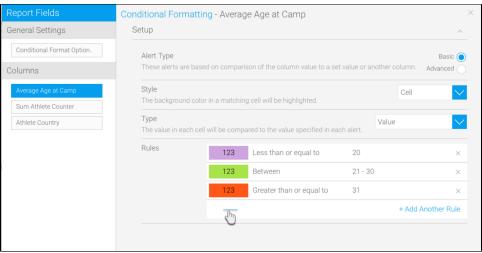

Part 1: Create Reports with Conditional Formatting

- 1. Create a new report. (See Creating a Report for more information on this)
- 2. For a gradient effect on your chart, apply conditional formatting on the report. (See Conditional Formatting on Columns on information on how to do this)

If no conditional formatting is applied, instead of the gradient effect, you could stylise a single value for your meter charts.

3. Add a few conditional formatting rules – establishing a range of measure. (For example, you can create three rules each with varying sets of values and assign them each a unique colour)

4. The selected column will be highlighted according to the conditional formatting chosen by you, as can be seen in our example below

Columns	% Average Age a	at Cam 🔰 Sum Athlete Counter 🦰 Athlete Cou	ntry
ows			
Average Age a	at Camp Sum At	thlete Counter ▼ Athlete Country ▼	
	28	30 Andorra	
	28	23 Argentina	
	33	108 Australia	
	37	556 Austria	
	36	29 Belgium	
	32	32 Bosnia and Herzegovina	
	46	5 Brazil	
	40	22 Bulgaria	
	34	696 Canada	
	23	2 Chile	
	35	78 China	
	26	7 Cyprus	
	37	25 Denmark	
	31	7 Finland	
	37	143 Germany	
	18	3 India	
	20	10 Iran	
	30	924 Italy

	35	38 Spain	
	29	12 Sweden	
	29	46 Switzerland	
	30	10 Turkey	
	27	18 United Kingdom	
	28	660 USA	

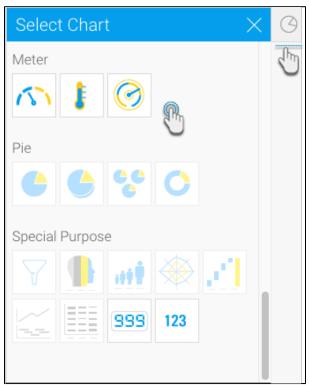

5. It's best to save this report before continuing.

Part 2: Select a Meter Chart Type

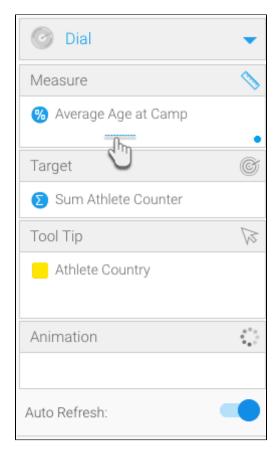

Once you've created your report and applied conditional formatting to it, continue with the procedure below to create meter charts:

- If you had saved the report after creating it, reopen it in the chart mode (Double-click Report > Edit > Charts)
 (Or if you currently have the report opened in another view, use the Charts button to move to the chart building page)

3. Click on the chart icon on the right most side and select one of the three meter chart types

- 4. Note: In our example, we will depict the process of creating the regular meter chart.
 5. After selecting the meter icon from the chart list, establish a measure by dragging the metrics you had previously applied the conditional formatting rules to the measure field

Part 3: Tweak the Chart's Settings

You can apply any type of formatting to your meter charts. There are no restrictions on any of the setting fields.

For the meter chart setting to be applied, the conditional formatting feature *must* be enabled.

1. Click on the meter format icon on top of the chart canvas

2. Then apply formatting conditions to your chart. Below is a description of these fields with examples.

The following table discusses all the meter formats:

Feature	Description				
Outline					
Show Outline	This option can make an outline appear around the chart				
Outline Color	Note: This setting will only appear if you Show Outline feature is switched on.				
	You can use this option to select a colour for the chart outline.				
Outline Width	Note: This setting will only appear if you Show Outline feature is switched on.				
	Fidget with this setting to alter the width of the chart outline.				
Example: With the S	Show Outline switched on and a blue outline colour of 5 cm set up for it, here's a glimpse at what the meter chart would look like.				
Ticks					
Show Tick Lines	This dropdown list lets you choose whether to include tick lines in the chart; you can also opt for only the major, minor or both types of scale increments.				
Tick Line Colour	Use this to toggle the colour of the tick lines.				
Major Tick Units	Set the increment level of the major tick units.				
	Warning: If you add a lesser value in this field, the data on the labels will go missing.				
	Note: The chart will display up to 20 units max, evenly spacing them out.				
Major Tick Length	Alter the length of the major tick units.				
Minor Tick Length	You can change the size of the minor ticks as well.				
Show Tick Labels	Enable this setting to display labels against the major ticks.				
Font	This appears if you have opted to show tick labels. You can alter the labels' font, including changing the type of font, its colour, scalability and even bold or italic styles.				
Summarize	Switch on this setting to summarize or shorten the tick labels if they have a numeric value.				
Decimal Places	If the above setting is on, use this to establish a decimal place for the tick labels.				
Rounding	Select how to round off numeric labels.				
Color Band					
Conditional Format	Leave this setting enabled to apply the conditional formatting rules you created to the meter chart.				
Folillat	Note: If disabled, the meter chart will go back to its default look.				
Gradient	Use this button to apply the gradient effect to your meter.				
Colour	Note: This will only appear if you disable the conditional format button.				
	If you have opted for the default look for your meter chart, you can change the colour of the chart band through here.				
Opacity	You can control the opacity of the chart's colour band through here.				

With You can set the colour band's width using this. Offset Use this field to add space between the color band and the outline. Background ? You can choose a background colour Colour? Toggle with the background transparency with this feature. Opacity Note: The level of opacity will be a percentage of the colour band's opacity value. **Value Indicator** Show Needle Use this to show or hide the needle indicator on regular meter and dial charts **Needle Point dicator** Needle Point dicator** Needle Dot Colour If the needle is being displayed, you can select any colour for its pointer part; or if not you can change the indicator's colour / indicator Colour If you've displaying a needle, use this to set a colour for its dot part Show Value Tick Length If you've chosen to hide the needle indicator, you can highlight a lick as an indicator by enabling Value Tick Length If you've opted for a tick indicator, you can alter its length through this field Show Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Colour Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) **Value Display** **Show Value Switch this button on to display the value of the measure on the chart Value Point If you'd display the measure value, you can alter the fort, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value. Rounding Select how to round off numeric liabuls. Show Field Name Font Change the font of the measure field if enabled Field Name Font Change the font of the measure field if enabled Field Name Font Change the font of the measure field if enabled Field Name Font Change the font of the measure field if enabled Field Name Font Change the font of the measure field if enabled Field Name Font Change the font of the measure field i						
Background Colour You can choose a background colour Colour Toggle with the background transparency with this feature. Packground Packground Toggle with the background transparency with this feature. Note: The level of opacity will be a percentage of the colour band's opacity value. Value Indicator Show Needle Use this to show or hide the needle indicator on regular meter and dial charts Needle Point / Indicator Colour If the needle is being displayed, you can select any colour for its pointer part; or if not you can change the indicator's colour / Indicator Colour If you're displaying a needle, use this to set a colour for its dot part Show Value Tick Length If you've chosen to hide the needle indicator, you can highlight at tick as an indicator by enabling Value Tick Length If you've opted for a tick indicator, you can alter its length through this field Show Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Length Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) Value Display Value Display Value Switch this button on to display the value of the measure on the chart Value Fort If you display the measure value, you can alter the font, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value. Decimal Places If the above setting is on, use this to establish a decimal place for the value. Select how to round off numeric labels. Show Field Name Fort Change the font of the measure field if enabled Field Name Fort Change the font of the measure field if enabled Field Name Fort Change the font of the target value General Target Settles General Target Settles Manual Target Exhibits a target on your meter chart. This field will only appear in the meter settings if a target hasn't already boen set through the ta	Width	You can set the colour band's width using this.				
Background Copacity Popacity P	Offset	Use this field to add space between the color band and the outline.				
Note: The level of opacity will be a percentage of the colour band's opacity value.	•	You can choose a background colour				
Value Indicator Value Indicator Show Needle Use this to show or hide the needle indicator on regular meter and dial charts Needle Point Robert Point Indicator Colour If the needle is being displayed, you can select any colour for its pointer part; or if not you can change the indicator's colour Indicator Colour Needle Point Colour If you've clasplaying a needle, use this to set a colour for its dot part Show Value Tick If you've chosen to hide the needle indicator, you can highlight at tick as an indicator by enabling Value Tick Length If you've opted for a tick indicator, you can after its length through this field Show Target Tick Switch this button on to display the target tick on the chart. (This only appears if the target is defined) Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Length Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) Value Display White measure value, you can after the font, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value. Decimal Places If the above setting is on, use this to establish a decimal place for the value. Rounding Select how to round off numeric labels. <t< td=""><td>•</td><td>Toggle with the background transparency with this feature.</td></t<>	•	Toggle with the background transparency with this feature.				
Show Needle Use this to show or hide the needle indicator on regular meter and dial charts Needle Point Indicator Colour If the needle is being displayed, you can select any colour for its pointer part; or if not you can change the indicator's colour Indicator Colour If you're displaying a needle, use this to set a colour for its dot part Show Value Tick If you're displaying a needle, use this to set a colour for its dot part If you're chosen to hide the needle indicator, you can highlight a tick as an indicator by enabling Value Tick Length If you're opted for a tick indicator, you can alter its length through this field Show Target Tick Solour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Length Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) Value Display Show Value Switch this button on to display the value of the measure on the chart Value Font If you display the measure value, you can alter the font, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value. Decimal Places If the above setting is on, use this to establish a decimal place for the value. Rounding Select how to round off numeric labels. Show Field Name Display the name of the measure field if enabled Field Name Font Change the font of the measure field is name Show Target Target Switture Manual Target Setting Menual Target In this button is enabled, it shows the target on the meter chart Target Font Change the font of the chart canvas. Betablish a target on your meter chart. This field will only appear in the meter settings if a target hasn't already been set through the target lifeld on the chart canvas. Betablish a target only appears for dial charts. You can use this to set a start angle for the dial. Note: This setting only appears for thermosta	Ораску	Note: The level of opacity will be a percentage of the colour band's opacity value.				
Needle Point //Indicator Colour	Value Indicator					
Needle Dot Colour Needle Dot Colour If you're displaying a needle, use this to set a colour for its dot part Show Value Tick If you've chosen to hide the needle indicator, you can highlight a tick as an indicator by enabling Value Tick Length If you've opted for a tick indicator, you can alter its length through this field Show Target Tick Switch this button on to display the target tick on the chart. (This only appears if the target is defined) Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Length Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) Value Display Show Value Switch this button on to display the value of the measure on the chart If you display the measure value, you can alter the font, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value. Decimal Places If the above setting is on, use this to establish a decimal place for the value. Rounding Select how to round off numeric labels. Show Field Name Display the name of the measure field if enabled Field Name Font Change the font of the target value General Target Settings Manual Target Establish a target on your meter chart. This field will only appear in the meter settings if a target hasn't already been set through the target field on the chart canvas. Show Bulb Note: This setting only appears for dial charts. You can use this to set a start angle for the dial. Dial Extent Note: This setting only appears for thermostat charts. Toggle with this button to show or hide the bulb shape at the end of the thermostat chart. Rounded Corners Note: This setting only appears for thermostat charts. You can alter the edges of the thermostat chart be displayed	Show Needle	Use this to show or hide the needle indicator on regular meter and dial charts				
Show Value Tick If you've chosen to hide the needle indicator, you can highlight a tick as an indicator by enabling Value Tick Length If you've opted for a tick indicator, you can alter its length through this field Show Target Tick Switch this button on to display the target tick on the chart. (This only appears if the target is defined) Target Tick Colour If displaying the target tick on your chart, you can use this to change its colour. Target Tick Length Add a value to set a length for the target tick. (This option is only for regular meters and dial charts) Value Display Show Value Switch this button on to display the value of the measure on the chart Value Font If you display the measure value, you can alter the font, including changing its type, colour and styling Summarize Switch on this setting to summarize or shorten the measure value.
