Developer Toolkit

This section provides detailed guides and documentation that will allow developers to use Yellowfin functionality and APIs in their own environments.

Data Source Connectors

Create custom third-party connectors to extract data from a data source.

Learn More

Advanced Functions

Create your own advanced functions to be used in Yellowfin reports.

Learn More

Deployment

Refer to our deployment section for a selection of guides on setting up different environments.

Learn More

Transformation Widgets

Build your own ETL widgets to be used in Yellowfin's Data Transformation module.

Learn More

Custom Formatters

Use this guide to create your own custom formatters.

Learn More

Custom Converters

Code your own data type converters with the help of this manual.

Learn More

Generic Configuration UI

This section provides information on a generic API for configuration and persistence to plug-ins.

Learn More

Data Science Integration

Integrate your PMML, PFA, R, and H2O.ai data science models into Yellowfin.

Learn More

Integration

Learn about the various methods Yellowfin could be integration into a third-party application.

Learn More

Web Services API

Integrate advanced BI functionality into your application with Yellowfin's web services.
