

# Content Translation

- [Overview](#)
- [Enabling Content Translation](#)

## Overview

[top](#)

Content Translation allows the system to provide User Entered reporting content across multiple languages by allowing users to translate content such as Report Names, Column Titles, Chart Labels, etc.

In order to enable multiple languages, the following process must be completed:

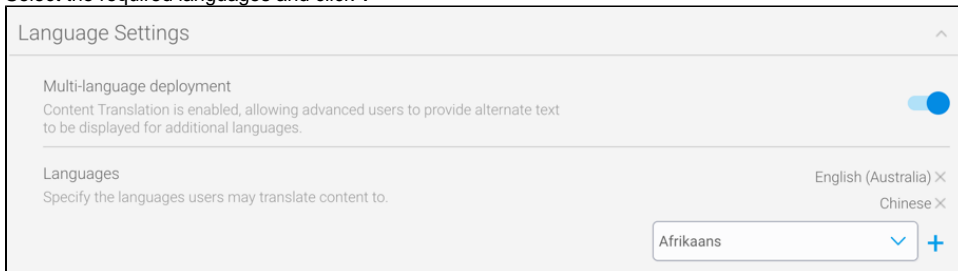

1. Create content
2. Define which languages should be supported in the system
3. Enable Translation in Configuration & appropriate Role Permissions
4. Export User Entered Text as a CSV
5. Translate CSV for all required languages
6. Import translations back into the system
7. Allow users to change their preferred language through Browser settings or My Profile
8. Maintain Translations

## Enabling Content Translation

[top](#)

The following must be completed in order to use Content Translation in Yellowfin:

1. The Translation Role Permission must be enabled by
  - a. Navigating to **Administration > Admin Console > Role Management**
  - b. Edit the Role(s) you wish to give Translation Access to
  - c. Enable the **Administration > Translate Content** permission
- d. Save your changes  
**Note:** in order to access the newly enabled Translation functionality, users will have to log out and then log in.  
**Note:** this is only required in order for a user to translate content themselves, users do not require this role permission to merely view the translated content.
2. Define the languages to be supported in the system by
  - a. Navigating to **Administration > Configuration > Region** tab, expanding the **Language Settings** section.
  - b. Set **Multi-Language Deployment** to **On**
  - c. Select the required languages and click **+**

- d. You should now have a list of supported languages.
- e. Click Save to update the settings.
