Drill Anywhere

☐

Drill Through

Drill Down	This option allows you to enable a hierarchy built in the view. You will be able to move up and down the implemented hierarchies within the one report. See <a href="#">Drill Down Reports</a> for more information.
Drill Anywhere	Like Drill Down, Drill Anywhere allows the user to move through levels of detail within a single report. The difference here is that the hierarchy, or path, is built by the user during the drill process, rather than the administrator during the view building stage. See <a href="#">Drill Anywhere Reports</a> for more information.
Drill Through	This option allows you to create links between summary and detail reports, passing values from the parent report to the filters of the child report. See <a href="#">Drill Through Reports</a> for more information.
Co-Display	This option allows you to display supporting reports on a main report, passing filter values from the master through to the child. See <a href="#">Co-Display Reports</a> for more information.
Charts	See <a href="#">Drill Capability on Charts</a> for more information on how to use drills on charts.
