

FileMaker Pro

Follow the instructions below to connect Yellowfin to a FileMaker Pro.

Yellowfin does not ship with the driver required for this connection due to licensing/paywall reasons. You will need to manually upload the driver through the [Plugin Manager](#) or [Creating a Basic Data Source Connection](#).

1. Click on the **Create** button and choose the data source option.

2. Select **FileMaker Pro** from the databases list.

Add a Data Source

6. **Authentication Adapter:** Specify an authentication method for the database adapter. More details [Advanced Connection Editor](#).

7. **Include Schema in SQL:** Select this checkbox to add the schema name when addressing database tables in SQL queries.

8. **Database Host:** Enter the name or IP address of the server hosting the FileMaker Pro database.

9. **Database Port:** Yellowfin will display the correct TCP/IP port number for this connection.

Database Port

8563

10. **Database Name:** Enter the name of the database containing the data that you require.

11. **JDBC Driver:** The JDBC driver talks to your **FileMaker** database.

JDBC Driver

com.exasol.jdbc.EXSDriver

12. **Username:** Enter the username of your database account.

13. **Password:** Provide the password of the above account.

14. Toggle Advanced Settings to see more settings.

15. Once you have completed your connection information, you will have several options:

a. **Back:** This will navigate to the database selection.

b. **Cancel:** This will close the New Connection popup.

c. **Test Connection:** This will test the connection parameters you provided to ensure it can connect to your database. If the connection is successful, an indicator will appear and you will be able to save the connection.

d. **Save:** This will allow you to save your connection and navigate to the Success page:
