

Chart Brushing

- [Overview](#)
- [Include](#)
- [Exclude](#)
- [Reset](#)
- [Incompatible Charts](#)
- [Limitations](#)

Overview

[top](#)

Brushing allows users to restrict results in their chart by choosing to **Include** or **Exclude** certain areas. This is a far more interactive method of filtering, as the user defines what they want to see or remove by highlighting the particular area on their chart.

Include

[top](#)

Once the chart has been created, you are able to restrict results to the ones you select by:

1. Click and drag to highlight an area on the chart
2. Select the **Keep** option

3. You will now notice that the chart has been restricted to only the values you selected in the highlighted range

Exclude

[top](#)

Once the chart has been created, you are able to remove results that you select from the chart by:

1. Click and drag to highlight an area on the chart
2. Select the **Exclude** option

3. You will now notice that the chart has removed the values you selected in the highlighted range

Reset

[top](#)

Once the chart has been brushed, you are able to reset results by:

1. Click and drag to highlight an area on the chart
2. Select the **Reset** option

3. You will now notice that the chart has been returned to its original state

Incompatible Charts

[top](#)

Brushing is not available on **all** chart types. The following are incompatible:

- Histogram
- Z Chart
- Maps
- Meters
- Waterfall
- Event
- Week Density
- Trellis (not compatible with **exclude** brushing)
- Auto Charts (not compatible with **exclude** brushing)

Note: chart brushing is **not** available when **Drill Anywhere** or **Drill Through** is enabled.

[top](#)

Limitations

Chart brushing will not be available in the following cases:

- The user has the Active Charts content setting option turned off.
- The chart is being repositioned on the design page.
- There is a time slider on the time series charts.
- There are analytic chart fields (Trend, Average, Accumulation, and Forecast) added to the chart.
- The chart is part of a multi-chart report.
- The chart is embedded in a separate location using the JS API.
- The chart is being edited in the Chart Builder.
