

H2O.ai Advanced Function

Follow this procedure to integrate a data model created in H2O.

- 1. Build a model in H2O.
- 2. Build a Yellowfin report with data you wish to generate predictions for.
- 3. Drag in a new column that is of the same data type as the prediction to be generated. For example, if your model returns a categorical prediction such as gender, you would want to use a text dimension.
- 4. Within the column formatting drop-down, click Advanced Function.

Columns	Gender	Σ Sum Invoiced Amo...
Rows		
Gender	Sum Invoiced Amount	
Female	\$11,31	
Female	\$12,12	
Female	\$21,91	
Female	\$131,70	
Female	\$164,10	
Female	\$227,10	
Female	\$230,66	
Female	\$253,08	
Female	\$266,47	
Female	\$273,58	
Female	\$280,88

H2O Predictions (Numeric)

Connect to your H2O server and generate predictions against the model of your choosing. Returns Numeric results.

Attribute	Setting	User Prompt
H2O URL		URL for the H2O instance.
Connect to H2O	☒ Reset ☐ Connect	

Step 1: Use "H2O Predictions (Numeric)" to convert to Numeric

6. Provide the full URL to your H2O instance (including the port number, as shown in the example below) and click Connect.

H2O URL

http://192.168.0.6:54321

Connect to H2O

☐ Reset
 ☒ Connect

7. If Yellowfin is able to connect to this URL, a drop-down menu will appear representing all of the models that are available for prediction. If your model is not currently supported, it will not appear in the list. Select the model you wish to generate predictions from and click Load.

Available Models

deeplearning-40a05ef7-c583-4c5a- ▾

Load Model

☐ Reset
 ☒ Load

8. A list of columns will appear representing the specified file's required input. Match these to columns in your report.

A maximum limit of 25 input fields applies. The system will not load a model which contains more inputs than the limit allows.

Gender	Gender
Age	Max Age at Camp

9. Click on Save.
10. Note: If there was a problem in generating predictions, check that you have provided valid columns of the same data type required by H2O, or look at the yellowfin.log file for a complete error description.
