

Infobright

Follow the instructions below to connect Yellowfin to an Infobright database.

Yellowfin does not ship with the driver required for this connection due to licensing/paywall reasons. You will need to manually upload the driver through the [Plugin Manager](#) or [Creating a Basic Data Source Connection](#).

1. Click on the **Create** button and then on Data Source.

2. Select **Infobright** from the databases list.

☒ Use Custom Fetch Size

Fetch Size

200

12. Yellowfin will automatically select the correct JDBC driver to talk to your Infobright database.
13. Enter the username and password of your database account.
14. Toggle Advanced Settings to see more settings.

Advanced Settings

15. Once you have completed your connection information, you will have several options:

← Back

Save

Test Connection

Cancel

- a. **Back:** This will navigate to the database selection.
- b. **Cancel:** This will close the New Connection popup.
- c. **Test Connection:** This will test the connection parameters you provided to ensure it can connect to your database. If the connection is successful, an indicator will appear and you will be able to save the connection.

← Back

Save

✓ Test Connection

Cancel

- d. **Save:** This will allow you to save your connection and navigate to the Success page:

Add a Data Source

×

✓ Data Source Saved

You successfully made your data connection.
