

# SAP (Sybase) ASE

Follow the instructions below to connect Yellowfin to a **SAP (Sybase) ASE** database.

1. Click on the **Create** button and choose the data source option.

2. Select **SAP (Sybase) ASE** from the databases list.

3. When the New Connection popup appears, provide a name and description for your database.
4. **Connection String**: when selecting Connection String you have the same functionality as in [Generic JDBC Data Source](#).

How To Connect

☐ Details

☒ Connection String

5. **Sybase ASE** configuration fields:

Authentication Adapter	Standard Authentication
	<input checked="" type="checkbox"/> Include Schema in SQL
Database Host	
Database Port	
Database Name	
JDBC Driver	net.sourceforge.jtds.jdbc.Driver
User Name	
Password	

6. **Authentication Adapter:** Specify an authentication method for the database adapter. More details [Advanced Connection Editor](#). Next, enter the name of the server hosting the database.

7. Enter the TCP/IP port number required for this database.

8. Specify the name of the database containing the data that you require.

Database Name	Invoice DB
---------------	------------

9. Yellowfin will automatically select the correct JDBC driver to talk to your Sybase ASE database.

10. Enter the username and password of your database account.

11. Toggle Advanced Settings to see more settings.

Advanced Settings

12. Once you have completed your connection information, you will have several options:

← Back

Save

Test Connection

Cancel

a. **Back:** This will navigate to the database selection.

b. **Cancel:** This will close the New Connection popup.

c. **Test Connection:** This will test the connection parameters you provided to ensure it can connect to your database. If the connection is successful, an indicator will appear and you will be able to save the connection.

← Back

Save

✓ Test Connection

Cancel

d. **Save:** This will allow you to save your connection and navigate to the Success page:
