JDBC Connections

Yellowfin allows users to establish connections to Java Database Connectivity (JDBC) data sources. This includes everything from the recommended MySQL database to Oracle, Postgres and more.

This section covers all the data source connections supported in Yellowfin, some of which are shipped with Yellowfin, and some which aren't. For the unpackaged connection, you are required to download the relevant database driver from the provider's website, and manually install it in Yellowfin. These drivers are not included in Yellowfin because of licensing/paywall reasons.

Connections with Drivers Included

You can find the following JDBC connections in Yellowfin that are immediately available for connection upon first startup:

Amazon RDS

Amazon Redshift

Apache Derby

Apache Hive / Hive 2

GreenPlum

HSQLDB Server

Microsoft Azure

Microsoft SQL Server

PostgreSQL

Sybase ASE

 Yellowfin also provides access to a built-in generic JDBC connector. See our guide on how to create this connection here.

Connections without Drivers Included

The following database can also be connected to Yellowfin by manually installing their drivers through the Plugin Manager.

Actian Ingres

Actian Pervasive

Actian Vectorwise

BMC Action Request

Clickhouse

Composite Information Server

Connection Cloud

Data Booster

Databricks

Embarcadero Interbase

Exasol

FileMaker Pro

Firebird

Google BigQuery

Google CloudSQL

H2

Vertica

IBM Db2

IBM Db2 AS/400

IBM Informix

IBM Netezza

IBM Red Brick

Infobright

InterSystems Cache DB

InterSystems IRIS

KISAM

Lotus Notes

LucidDB

MariaDB

MarkLogic

Microsoft Access

Microsoft FoxPro

Mitsubishi DIAPRISM

MonetDB

MySQL

NuoDB

Oracle

ParStream
Phoenix

Presto

Progress

Progress OpenEdge

Rocket U2/UniVerse

SAP HANA

SAS

SalesForce.com

Simba

Snowflake

Spectrum Model Store

SQLite

Sybase IQ

Sybase SQL Anywhere

Teradata

Teradata Aster
