

Default Filter Values in Dashboards

Overview

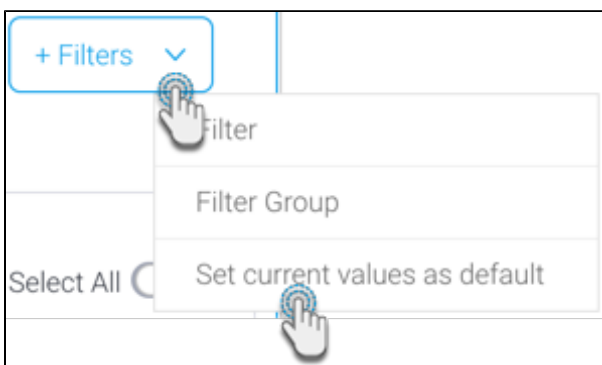

This tutorial allows you to set default values for dashboard filters.

Tutorial

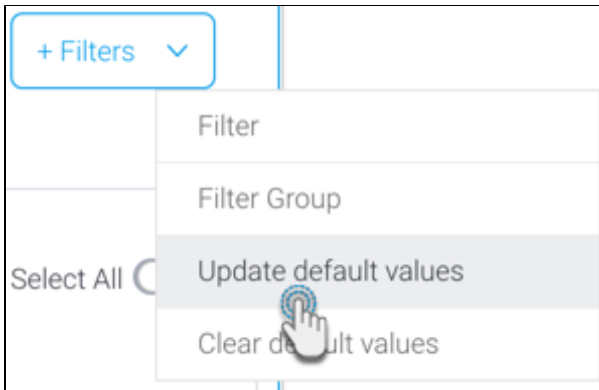

1. Add a filter to your dashboard using the filter widget. (For a tutorial on this, click [here](#).)
2. Select a value that you wish to define as the default. Or if you added a filter which has default selections defined in the report, then those values should automatically appear here.

3. Click on the **+ Filters** buttons and select the **Set current values as default** option.

4. Now your selection will appear as the default value for the filter.
5. To update these values, make different selections, then choose the **Update default values** option from the **+Filters** button menu.

6. To remove or clear default filter values from the dashboard, use the **Clear default values** options from the **+Filters** button menu.
