

Dashboard Associated Reports

Overview

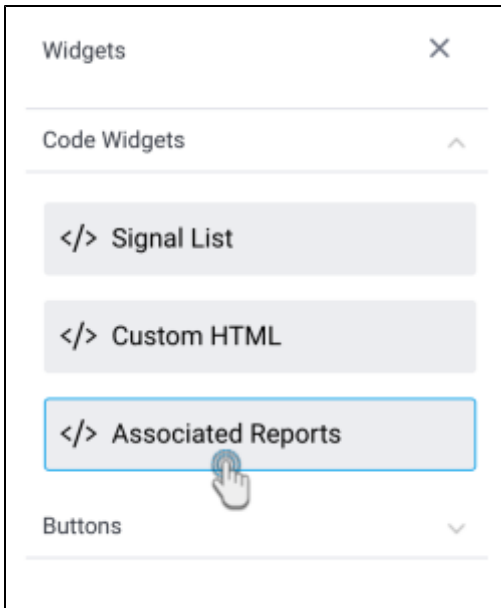

Dashboards can also contain links to relevant reports, rather than fully displaying them. These reports are generally detailed reports that are too granular or complex for use on a Dashboard; they can be added as links to provide additional, supporting information related to the Dashboard content.

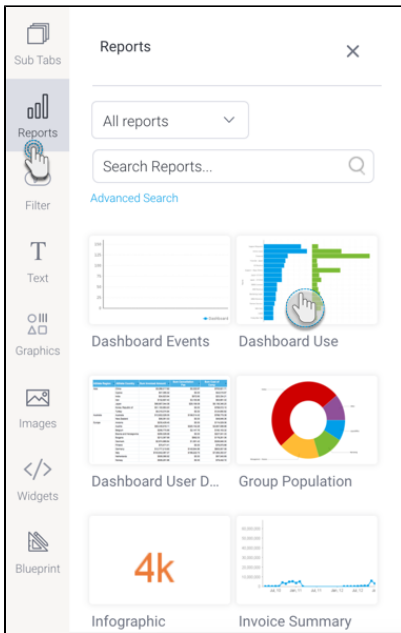

Adding Associated Reports

This feature is provided as a Code Widget. It's supported on both types of dashboard sub tabs: canvas, and static layouts.

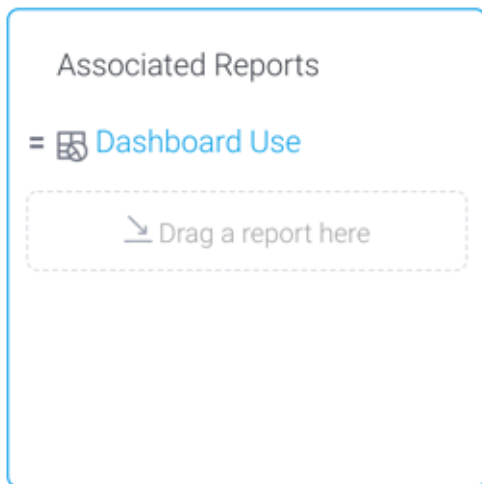

1. Click on the **Widgets** button on the left.
2. From the **Code Widgets** section in the list that appears, drag the **Associated Reports** widget onto the sub tab. Note that this can be added to a static layout panel, global side containers, or the canvas.

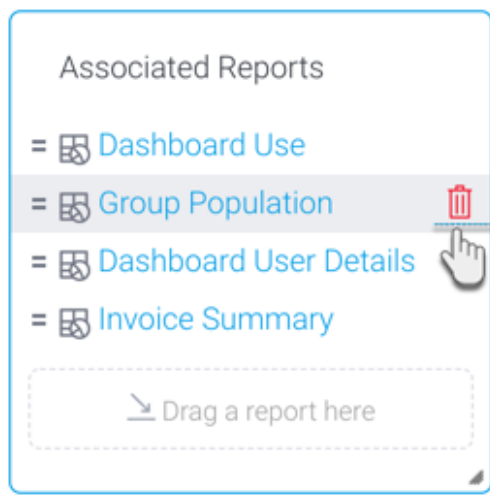

3. On doing so, you will be able to see an Associated Reports panel on the dashboard.
4. Open the report widget panel by clicking on the **Report** button, and drag the report you want to display as a link, to the Associated Reports panel.

5. Upon doing so, the added report will display as a link in the panel.

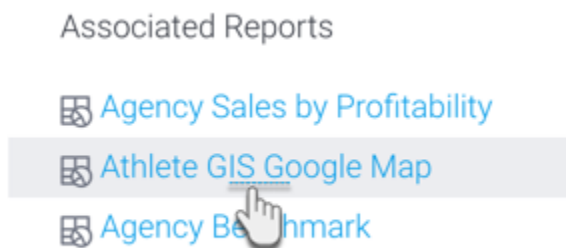

6. You can add multiple associated reports to the same panel. Repeat the above steps to do so.
7. To delete an associated report, hover over its link, and click on the **delete** icon.

8. To rearrange reports in the list, click on the  icon and drag it to any order in the list.

Dashboard users will see these links in the published dashboards.

Clicking on them will open the report in its output page, along with a Return to Dashboard button. Users can use this button to navigate back to the dashboard.
