

JS API References

This section includes detailed API references for each sub-API, including:

- [Advanced API](#)
- [Dashboards API](#)
- [Sub Tabs API](#)
- [Report API](#)
- [Filters API](#)
- [LoaderEvents API](#)
- [Widget API](#)
- [Guided NLQ API](#)

Each API reference contains:

- An overview and a description of the purpose of the API
- Any properties if applicable
- A function reference (Description, parameters, returns, code snippet)
- An event reference
- Limitations, such as whether a feature can be used in code more, embedding mode or both.

If you're looking for an overview of the JS API and how its components hang together, visit the [JS API Components](#) wiki page.
