Overview

[top](#)

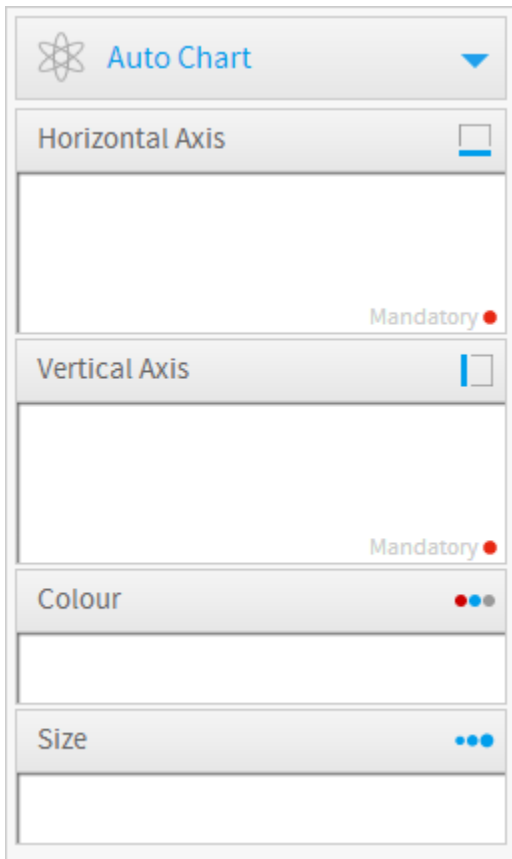

The first step in creating your chart is selecting the appropriate chart type to most effectively visualise your data. There are two methods for chart creation:

1. Auto Chart
2. Chart Selection

Auto Chart

[top](#)

The Auto Chart functionality provides some common component areas to be populated, and depending on what fields you drag into them, a chart will be generated.

The image shows a vertical configuration panel for the 'Auto Chart' feature. At the top is a header with a blue atom icon, the text 'Auto Chart', and a downward arrow. Below this are four main sections, each with a title bar and a large empty box for configuration:

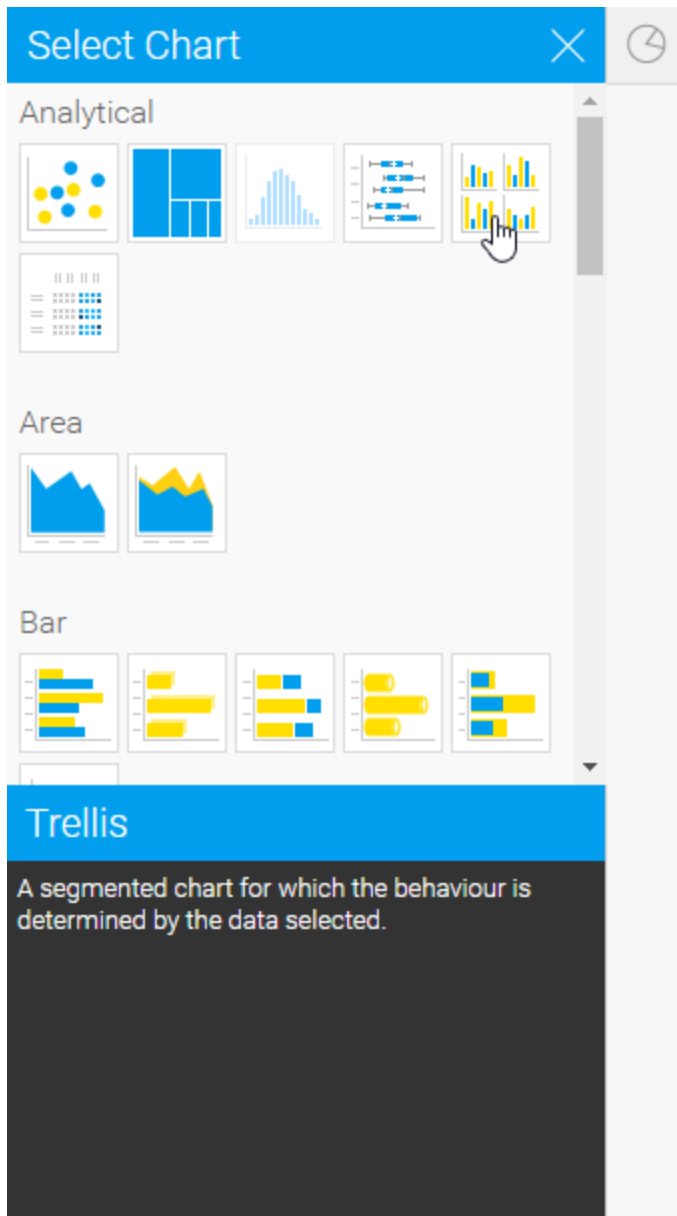

- Horizontal Axis:** The title bar has a checkbox icon. The box below contains the text 'Mandatory' followed by a red dot.
- Vertical Axis:** The title bar has a checkbox icon. The box below contains the text 'Mandatory' followed by a red dot.
- Colour:** The title bar has three colored dots (red, blue, grey). The box below is empty.
- Size:** The title bar has three blue dots. The box below is empty.

Note: auto charts generate common chart types such as; Bar, Column, Scatter, and Line. If you are looking for a specific chart or specialty chart it would be better to select the type from the Chart Selection panel on the right.

Chart Selection

[top](#)

The following list of chart choices will assist you to make your selection. After you have made a selection it is easy to swap between chart types to see how your data might look with different visualisations.

Icon	Type	When to Use
	Scatter	A scatter plot (points not joined) chart that allows the charting of 2 related attribute series. Can only be used if the data series are related. Useful for seeing trends in data that is not linear.
	Treemap	Compares metric values via a size relationship. Can also be used to show hierarchical relationships.
	Histogram	Shows the number of times a given value occurs in the dataset.
	Box & Whisker	A chart which gives a quick overview of series of values and their statistical properties.

	Trellis	A segmented chart for which the behaviour is determined by the data selected.
	Heat Grid	Plots the intensity of a metric across multiple categories.

See [Analytical Charts](#) for more information.

Icon	Type	When to Use
	Area	You want to emphasize the magnitude of change over time. Use an area chart to show how much the value of a measure changes over time.
	Stacked Area	You want to emphasise the magnitude of change over time, while comparing multiple categories.

See [Area Charts](#) for more information.

Icon	Type	When to Use
	Horizontal Bar	You want to highlight values for easy comparison and plot your numbers horizontally. Use a bar chart to place less emphasis on time and focus on comparing values.
	3D Horizontal Bar	Similar to the horizontal bar chart, but in three a dimensional form.
	Stacked Horizontal Bar	Categorical data, grouped or stacked to assist comparison. Use when part-to-whole comparison is important.
	Horizontal Cylinder	Similar to the horizontal bar, but having chart components shown in cylindrical form.
	Proportional Bar	Displays how close values in different categories came to the highest category value.

See [Bar Charts](#) for more information.

Icon	Type	When to Use
	Vertical Column	You want to highlight values for easy comparison and plot your numbers vertically. Use a column chart to place less emphasis on time and focus on comparing values.

	3D Vertical Bar	Similar to the vertical bar chart, but in three dimensional form.
	Stacked Vertical Bar	Also referred to as stacked column charts and used when part-to-whole comparison is important.
	Cylinder	Similar to the vertical bar, but having chart components shown in cylindrical form.
	3D Stacked Vertical Bar	Similar to the 3d stacked vertical bar chart, but in three dimensional form.
	Layered	Compares the contribution of each value to a total across categories.

See [Column Charts](#) for more information.

Icon	Type	When to Use
	Combination Charts	Combination charts, in effect, superimpose one chart type above or below another. Use to improve clarity and highlight relationships between data sets.
	Overlay Chart	Use the line chart to emphasize a trend and bars to emphasize specific values. Line/Bar combinations may work better by de-emphasizing bars through the use of subtle colours.

See [Combination Charts](#) for more information.

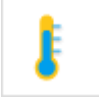

Icon	Type	When to Use
	Financial Line	Use this chart to display a trading value with a subchart displaying volume.
	High Low	Shows daily high, low, opening and closing values with tick positions corresponding to opening and closing values.
	Candlestick	Shows daily high, low, opening and closing values with different colour bars depending on the daily direction.

See [Financial Charts](#) for more information.

Icon	Type	When to Use
------	------	-------------

	Line	You want to view trends over time by plotting data at points connected by lines. Use a line chart to plot many metrics.
	3D Line	Similar to the line chart, but in three-dimensional form.
	Z Chart	Trends over a short period of time; displaying the data, accumulative total, and moving total.
	Stepped Line	A line chart where movement is shown in steps rather than straight lines.

See [Line Charts](#) for more information.

Type	Icon	When to Use
	Image Maps	If you do not have GIS defined columns you can use the Image Maps to create heat maps – these are a good way to display metrics with a spatial element such as Revenue by State or Country You will only be able to render maps for which an image map has been defined.
	Google Maps	Google Maps allow you to render location data points onto a Google map which will be displayed as a Yellowfin Chart – along with associated Google map widgets.
	GIS Google Maps	A Google map which uses GIS data for its marker coordinates.
	GIS Maps	GIS Maps allow the rendering of complex GIS polygons. These can be used to render spatial reports on the fly based on the GIS data available in a report.
	GIS Bubble Map	A bubble map in which bubble positions are specified by GIS points.
	GIS Heat Map	A heat map where colours representing GIS points are blended based on intensity.
Type	Icon	When to Use
	Meter	You want to measure the rate of change of a measure against pre-defined targets. Useful for dashboard reporting.
	Thermometer	Vertical representation of the meter chart, indicating a range of qualitative indicators.

	Dial	Used to communicate key performance indicators.
	Numeric Display	Shows the value of a metric on a digital display.

See [Meter Charts](#) for more information.

Type	Icon	When to Use
	Pie	You want to show the relationship of parts to the whole. Use a pie chart to highlight proportions rather than actual values. If it is important to show actual values in the chart, avoid using the pie chart type.
	3D Pie	Similar to the pie chart, but in three a dimensional form.
	Multi Pie	Used to highlight individual component sizes in a system of multiple components.
	Ring	Similar to the pie chart, but in a circular ring form.

See [Pie Charts](#) for more information.

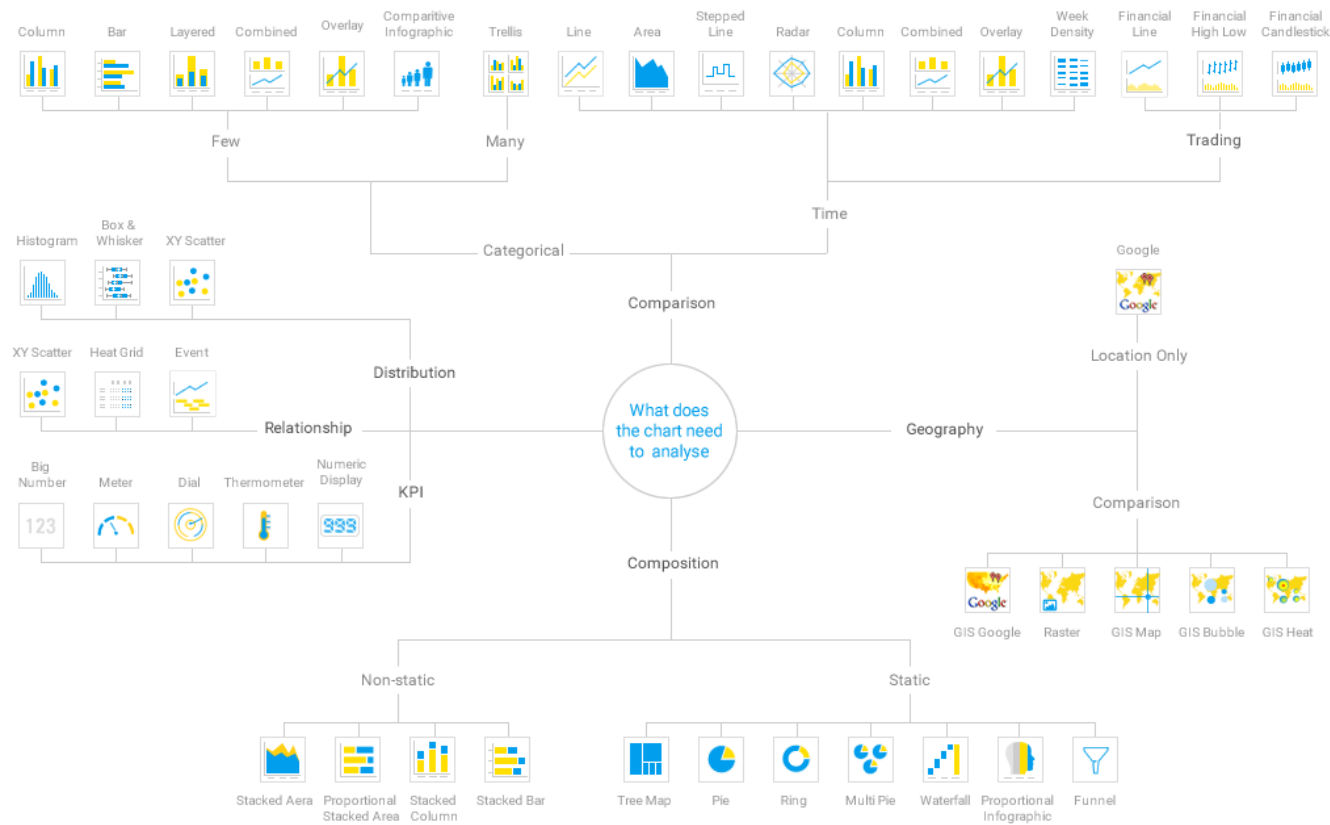

Type	Icon	When to Use
	Funnel	Used to show the status of stages in a process.
	Proportional Infographic	Displays segments on an image, with the segment size representing metric value.
	Comparative Infographic	Displays images sized in such a way to correspond to a metric.
	Radar	You want to compare data by integrating multiple axes into a single radial figure.
	Waterfall	Waterfall charts are a special type of Floating Column Chart. A typical waterfall chart shows how an initial value is increased and decreased by a series of intermediate values, leading to a final value.
	Event	Maps the occurrence of events against the values of a numeric data set over time.

	Week Density	Shows the density of occurrences based on hour relative to other densities on the same day of the week.
--	---------------------	---

See [Special Purpose Charts](#) for more information.
