Overview

[top](#)

The Main Theme section of the Theme Builder allows you to define everything outside of the colours defined in Sections. This includes all settings for the Title, Table of Contents, Associated Content slides, as well as all formatting for the Section Title, Content, Quote, and Image slides.

The colours for Sections are applied in the [Section Theme](#) area.

General

[top](#)

The settings applied here affect the entire theme and provide means to help identify the theme when selecting it in the Storyboard builder.

Item	Value	Description
Title	Text	This is used to provide a name for your theme, used when selecting a theme for the Storyboard.
Description	Text	This is used to provide a description for your theme which may include its intended use, etc.
Thumbnail	Image	Upload or select an image to use when viewing the theme list or selecting a theme in the Storyboard Builder.
Slide Border		
Colour	Hex Code	This is used to specify the colour of the border around your slides. By default it is blank.
Width	0,1,2,3,4,5.	This is used to specify the width of the border around your slides. By default it is 0.

Style	Solid, Dashed, Double, Groove, Ridge, Inset, Outset.	This is used to specify the style of the border to appear around your slides. Examples below were created with the colour #FFCC00 and a width of 5px. <div><div></div><div></div><div></div><div></div><div></div><div></div><div></div><div><div>Solid</div><div>Dashed</div><div>Double</div><div>Groove</div><div>Ridge</div><div>Inset</div><div>Outset</div></div></div>
Report		
Show Title	Yes/No	This allows you to turn off the title of the report when displayed on a slide.
Show Description	Yes/No	This allows you to turn off the description of the report when displayed on a slide.
General Layout		
Title and Subtitle same width	Yes/No	This allows you to ensure the Title and Subtitle on slides are the same length, meaning the smaller of the two boxes will be the same size as the larger, ensuring their backgrounds (if applied) line up.

Title Slide

[top](#)
The settings applied to the Title Slide are defined outside of the Sections area as it does not belong to any section. You should apply and colours and Images required here.

Item	Value	Description
Background Image	Image	This allows you to upload or select an image to use for the background of the Table of Contents slide. Generally it's recommended that this image is relatively plain, as there can be a large amount of text displayed on this slide, depending on how many slides and sections you build into your Storyboards.
Background Colour	Hex Code	Select a colour to be used as the background of the Table of Contents slide, used when no Background Image is selected.
Text Background Colour	Hex Code	Provide a colour for use as a background to the Table of Contents text (minus the title).
Opacity	%	Set the opacity of the background colour for the Table of Contents text. This is used when a Background Colour has been selected, the higher the % the stronger the colour will appear.
Vertical Rule	Hex Code	This is the colour used for the vertical line situated below the Section circles on the Table of Contents slide.
Horizontal Rule	Hex Code	This is the colour used for the horizontal line situated at the end of each Section on the Table of Contents slide.
Title		This is the heading of the Table of Contents slide, often 'Table of Contents' or 'Contents'.
Size	px	Provide the size (in pixels) of the font to be used in the Title of the slide.
Font	Font	Provide the font to be used in the Title of the slide.
Font Weight	Weight	Provide the thickness of the characters to be used: 100, 200, 300, 400, 500, 600, 700, 800, or 900, where 400 is normal and 700 is bold.
Style	Bold, Italic, Underline	Select any style options to be applied to the Title of the slide.
Font Colour	Hex Code	Provide the colour to be used for the text in the Title of the slide.
Section Title		This is the Title of each Section, displayed next to the coloured Circles.
Size	px	Provide the size (in pixels) of the font to be used for the Section Titles.
Font	Font	Provide the font to be used for the Section Titles.
Font Weight	Weight	Provide the thickness of the characters to be used: 100, 200, 300, 400, 500, 600, 700, 800, or 900, where 400 is normal and 700 is bold.
Style	Bold, Italic, Underline	Select any style options to be applied to the Section Titles.
Font Colour	Hex Code	Provide the colour to be used for the Section Titles.
Slides		This is the name of each Slide, displayed next to the bullet points under each Section Title.
Size	px	Provide the size (in pixels) of the font to be used in for the main text.
Font	Font	Provide the font to be used for the main text.
Font Weight	Weight	Provide the thickness of the characters to be used: 100, 200, 300, 400, 500, 600, 700, 800, or 900, where 400 is normal and 700 is bold.
Style	Bold, Italic, Underline	Select any style options to be applied to the main text.
Font Colour	Hex Code	Provide the colour to be used for the main text.

Associated Content

[top](#)
Associated Content slides are styled outside of sections as they are meant to be supporting information, separate from the main section content. Generally we suggest making these slides plainer, with a different colour to any section used.

These slides do not contain the standard Title and Subtitle elements used on other slides, their Title is only used in the link displayed on the main slide, not on the Associated Content slide itself. Think of them as stripped down content slides.

Item	Value	Description
Background Image	Image	Select a background image to be used for Associated Content slides, across all Sections.
Background Colour	Hex Code	Select a colour to be used as the background of these slides, used when no Background Image is selected.
Table/Chart Background Colour	Hex Code	Select a colour to be used for the background of any Tables or Charts added to an Associated Content slide.

Opacity	%	Set the opacity of the background colour used for Tables or Charts. This is used when a Background Colour has been selected, the higher the % the stronger the colour will appear.
Text Background Colour	Hex Code	Select a colour to be used for the background of any text placed on an Associated Content slide.
Opacity	%	Set the opacity of the background colour used for the text placed on an Associated Content slide. This is used when a Background Colour has been selected, the higher the % the stronger the colour will appear.
Text Colour	Hex Code	Use this to apply a colour to any text that is displayed on an Associated Content slide and styled as Text .
H1 Colour	Hex Code	Use this to apply a colour to any text that is displayed on an Associated Content slide and styled as Heading 1 .
H2 Colour	Hex Code	Use this to apply a colour to any text that is displayed on an Associated Content slide and styled as Heading 2 .
H3 Colour	Hex Code	Use this to apply a colour to any text that is displayed on an Associated Content slide and styled as Heading 3 .
Report Title		
Colour	Hex Code	Set a colour to be applied to the Title of any Reports added to an Associated Content slide. This is only used if Report Titles are set to display in the Theme's General settings.
Report Description		
Colour	Hex Code	Set a colour to be applied to the Description of any Reports added to an Associated Content slide. This is only used if Report Descriptions are set to display in the Theme's General settings.

Text Format

[top](#)

You may notice that the text formatting options do not contain any colour settings, only font options. This is because colours should either belong to a Section (for Content, Quote, or Image slides) or to a specific slide type styled outside of Sections (Title, Table of Contents, and Associated Content).

Item	Value	Description
Slide Title		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Title. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Title. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Title. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Title. This defines the area allocated to the title, which will expand if the text entered is too long. This is used for centering and when background colours are used.
Top	px	Define the position the Title area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Title area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Title area starts (in pixels) from the left of the slide.
Right	px	Define the position the Title area ends (in pixels) from the right of the slide.

Text Alignment	Left, Right, Centre	Select the desired alignment for the Title text. Note: in order to set the text alignment you must specify a Minimum Width.
Slide Subtitle		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Subtitle. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Subtitle. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Subtitle. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Subtitle. This defines the area allocated to the text, which will expand if the text entered is too long. This is used for centering and when background colours are used.
Top	px	Define the position the Subtitle area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Subtitle area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Subtitle area starts (in pixels) from the left of the slide.
Right	px	Define the position the Subtitle area ends (in pixels) from the right of the slide.
Text Alignment	Left, Right, Centre	Select the desired alignment for the Subtitle text. Note: in order to set the text alignment you must specify a Minimum Width.

Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Title. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.

Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Title. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Title. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Title. This defines the area allocated to the title, which will expand if the text entered is too long. This is used for centering and when background colours are used.
Top	px	Define the position the Title area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Title area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Title area starts (in pixels) from the left of the slide.
Right	px	Define the position the Title area ends (in pixels) from the right of the slide.
Text Alignment	Left, Right, Centre	Select the desired alignment for the Title text. Note: in order to set the text alignment you must specify a Minimum Width.
Slide Subtitle		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Subtitle. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Subtitle. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Subtitle. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Subtitle. This defines the area allocated to the text, which will expand if the text entered is too long. This is used for centering and when background colours are used.
Top	px	Define the position the Subtitle area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Subtitle area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Subtitle area starts (in pixels) from the left of the slide.
Right	px	Define the position the Subtitle area ends (in pixels) from the right of the slide.
Text Alignment	Left, Right, Centre	Select the desired alignment for the Subtitle text. Note: in order to set the text alignment you must specify a Minimum Width.
Text Box		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Text Box. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Text Box. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Content		
Padding between content	px	Provide the size (in pixels) of the padding between two pieces of content.
Offset Top	px	Define the position the Content area starts (in pixels) from the top of the slide.
Margin Right	px	Define the position the Content area ends (in pixels) from the right of the slide.
Margin Left	px	Define the position the Content area starts (in pixels) from the left of the slide.

Quote		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Quote. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Quote. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Quote. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Quote. This defines the area allocated to the title, which will expand if the text entered is too long. This is used for centering and when background colours are used.

Top	px	Define the position the Quote area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Quote area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Quote area starts (in pixels) from the left of the slide.
Right	px	Define the position the Quote area ends (in pixels) from the right of the slide.
Text Alignment	Left, Right, Centre	Select the desired alignment for the Quote text. Note: in order to set the text alignment you must specify a Minimum Width.
Attribute		
Padding X	px	Provide the size (in pixels) of the horizontal padding (left & right) for the Quote Attribute. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Padding Y	px	Provide the size (in pixels) of the vertical padding (top & bottom) for the Quote Attribute. Padding is the space between a piece of content, such as text, and the edge of the area allocated to that content.
Height	px	Provide the height (in pixels) to be allocated to the Quote Attribute. If the text is larger than the height it will not be cut off, but the height will still define the size of the background colour, if a colour has been defined.
Minimum Width	px	Provide the minimum width (in pixels) for the Quote Attribute. This defines the area allocated to the title, which will expand if the text entered is too long. This is used for centering and when background colours are used.
Top	px	Define the position the Quote Attribute area starts (in pixels) from the top of the slide.
Bottom	px	Define the position the Quote Attribute area ends (in pixels) from the bottom of the slide.
Left	px	Define the position the Quote Attribute area starts (in pixels) from the left of the slide.
Right	px	Define the position the Quote Attribute area ends (in pixels) from the right of the slide.
Text Alignment	Left, Right, Centre	Select the desired alignment for the Quote Attribute text. Note: in order to set the text alignment you must specify a Minimum Width.
